To: Sam Tovey <sam.tovey@intapp.com>, Alexander Zayac <alexander.zayac@intapp.com>

Dear Client,

My name is Tyler Crews, and I am a Data Migration Consultant working for Intapp. I have recently been assigned your account, and will be responsible for facilitating the migration of the data from The Company into the Intapp DealCloud system.

I've gotten a headstart looking at your data based on the scoping notes I was sent over, but I need you to answer a few clarifying questions about the datasets you've sent over.

First and foremost, at Intapp we work hard to make sure we retain as much of your data as possible through the migration. I have created a quick rough draft for how your data tables will be constructed.

Companies Table:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	
1	id_company	Company Name	Project Name	Date Added	LTM Revenue	LTM EBITDA	Vertical	Sub Vertical	Current Owner	Business Description	Lead MD	Website	AUM (Bns)	Sub Vertical (Secondary)	Sample Portfolio Companies	Comments

Contacts Table:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q
1	id_contact	Company	Name	Title	Vertical	Sub-Vertical	E-mail	Phone	Secondary Phone	City	Birthday	Coverage Person	Preferred Contact Method	Sub-Vertical 2	Company Name	id_company

Deals Table:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P
1	Company Name_x	Invest. Bank/Banker	Sourcing	Transaction Type	Enterprise Value	Est. Equity Investment	Status	Portfolio Company Status	Active Stage	Passed Rationale	deal_company_id	Name	banker_id	Company Name_y	banking_company_id

Marketing Participants Table:

A	B	C	D	E
1	Name	E-mail	Attendee Status	Event
				id_contact

That being said my first question is whether all of the fields sent in these documents are desired to keep through the migration. If there are any fields that you do not want to carry over please let me know a list of them, otherwise I will err on the side of keeping all of them. They can always be removed later.

I also have a few other more specific questions:

1. The main discrepancy between your Consumer Retail and Healthcare Pipeline and your Business Services Pipeline data is the decomposition of the company's LTM EBITDA data across several years. In the Business Services pipeline you include this historic EBITDA data, but do not use the main EBITDA column at all.

Is it possible to consolidate these columns? Is the historic data necessary in the BS Pipeline file, or can just the most recent EBITDA be kept so it matches the CR&H Pipeline?

2. Some fields have highlighting/outlining/colored text, could you review these categories and see if there is any information that needs to be retained from the styling of your data?

2.a. Consumer Retail and Healthcare Pipeline - Active Stage cells outlined in red

2.b. Consumer Retail and Healthcare Pipeline - some rows have highlighted cells

2.c. Business Services Pipeline - Enterprise Value some cells have blue text.

3. I was curious about the importance of the Coverage Person, and if those coverage people should be maintained in some kind of data table. They don't seem to have enough individual information to merit inclusion in the Contacts table - is that because they are just company employees?

4. From my initial review there appear to be no duplicate company names in any of your pipeline data. But if a duplicately named company were introduced to the pipeline data, how would it be uniquely identified from a company that already exists? Can a company go through the pipeline multiple times?

5. I would love some more insight into the relationships of your public equity companies. It is clear that the companies listed in this file are not one of the two verticals. Are these PE Companies companies that you would like to have listed in your company's relationships? If so, would it be satisfactory to include them in the Company table but as a third vertical type called "Private Equity?"

6. For the field "Invest. Bank" is that short for "Investing Bank" or "Investment Bank?" Would it be more desirable to

leave it as is or change it to an unabbreviated field name?

7. I have proposed which fields will be carried into the deals column, are there any that should be in the company data instead? And the reverse - any fields I have labeled as company table data that should be in fields?

Thanks for your time. I look forward to your correspondence at your earliest convenience.
